

Product Data Sheet: ELKTC79A130321B

***Bond Tite*[®] TC-79 Corrosion Inhibitor for Paints**

- Used in Solvent-Based Baking Enamels/2K PU/UV Curable Coatings.

Characteristics:

1. Excellent Adhesion to a Variety of Metals.
2. Excellent Compatibility with a Variety of Resins.
3. Dissolved in Benign Solvent with None Regulated Metal Salts Content.
4. Versatile and Readily Usable in a Variety of Paints and Coatings of Solvent-Type Baking Enamels/2K PU/UV Curable Coatings.
5. Enhancing Improvement to Resistance to Temperature, Acid, Alkaline and Corrosion.
6. Economical and Efficient in Low Dosage when Used.

Introduction:

Bond Tite[®] **TC-79** is a highly effective adhesion promoter to a variety of metal substrates, when incorporated into solvent-based industrial coatings. Especially for copper and copper alloys, *Bond Tite*[®] **TC-79** can help improve significantly their adhesion to coatings, while they can be protected from corrosion attack.

It is recommended that, to achieve the satisfactory adhesion performance, *Bond Tite*[®] **TC-79** is to be used in coatings at the dosage of 2% or less, solid by solid, of the total coating solids. In general, 1% should be the point to start with, followed by the ladder experiments. Even though *Bond Tite*[®] **TC-79** has good compatibility with a variety of resins, we still suggest an initial test is required, considering the wide spectrum of resins and suppliers thereof available.

Specifications:

Appearance:	Amber translucent solution
Solid Content, 110 °C x 30 min.	18 ± 1 %
Solvent:	PMA (Propyleneglycol monomethylether acetate)
Chemical Type:	Organo-inorganic complex $\text{Ar}-\text{O}-\overset{\text{O}}{\parallel}{\text{C}}-\text{N}-\text{R}-\text{Si}(\text{OR})_3$
Specific Gravity, gm/ml, 25°C:	0.95 ~ 0.98
Flash Point, °C:	> 42

We strive our best and believe in the accountability of information provided herein. However, whether expressed or implied, we warranty no particular applications of this product. It is at disposal of our customers' own tests, to meet their particular requirements or performance.

Suggestions:

1. Before use, it is advised to test the compatibility and stability of *Bond Tite*[®] **TC-79** with coating resins.
2. During use, take any necessary precautionary measures and safety tools, to avoid any hazards caused by the solvent-borne *Bond Tite*[®] **TC-79**.
3. After use, it is advised to seal *Bond Tite*[®] **TC-79** tightly in containers, to avoid any evaporation or contamination.
4. To evaluate its performance, it is advised to compare, before and after the incorporation of *Bond Tite*[®] **TC-79** into the same coating system, the adhesion, gloss, hardness, corrosion resistance, adhesion, or any other properties deemed necessary.
5. In normal use, the dosage of *Bond Tite*[®] **TC-79** is maintained below 2% in coatings, solid by solid against total coating solid; more than this may cause any cross-linking or side reactions in coatings, which may hurt product shelf life.

Product Storage:

It is advised that the sealed, unused *Bond Tite*[®] **TC-79** in original container is preferably stored at ambient temperature and under well ventilated condition; direct sunlight is to be avoided.

Whereas those opened and used, the remaining *Bond Tite*[®] **TC-79** in the original containers are preferably sealed tightly right after, and to be used-up preferably in three months of time.

Packages:

20 kilograms net in PE plastic pails or 200 kilograms net in PE plastic drums.
